That is true.

There isn't going to be anything  
but a date for that stuff in the  
equipment database.

The things that need to be  
included in SCRIBE for instrument  
calibration depend on what data  
you want to include. Does the  
initial "field" 3030 readings get  
put into the SCRIBE data set? If  
so, you need to include the  
instrumentation for the 3030. If  
not, it'll just be the sampling  
equipment calibration.

The "field" counting thing needs  
to be decided upon today. How  
will we manage that data, in or  
outside of SCRIBE?

Data Element Dictionary - 2nd Draft

The calibration I think they want is from the yearly calibration. I'm looking a record from equipment here in Dallas. So I'm going to leave that in the Instruments table for now. Going to try and get the sheets electronically from the warehouse. Let me know what all needs to be captured for calibration in Scribe and we can attach the PDF as well.

Yes, I spoke with him a short time  
ago.

I am not sure if Rick has been able  
to review this, he was in meetings  
earlier. He is available to review  
this now. Please send to us and I  
will call him and walk him  
through it. He is in the process of  
revising the MDAs.

Hey Everyone,

Here is the first stab at the Data Element Dictionary for the SCRIBE database to support the fires ER. This is very rough and we need your input. Please review and provide comments, I would not distribute this very far right now because

it is a very rough first draft.

Melissa is working on an ERD as we speak.

Thanks,

*Brad Morgan*
